See the misc_feature tag below for the boundaries of the MTP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Three different programs (Glimmer, Critica and Orpheus) were used for ORF-prediction. A nonredundant list of ORFs was generated by suitable parsing of the results.

Automated annotation was done with the software package Pedant Pro (http://www.biomax.de). All ORF predictions and annotations were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       product="hypothetical protein-signal peptide prediction" (protein id="CAD78974.1" (db_xref="GI:32447385"
                                                    This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or coveredby high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; allregions were covered by at least one plasmid Sequence; assembly was additionally confirmed by long range pcr and cosmid end sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          translation="MFASRWTWVRAASLTASPTCATPSHLARHSQQNASWSEPCK"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Three different programs (Glimmer, Critica and Orpheus) were used for ORF-prediction. A nonredundant list of ORFs was generated by suitable parsing of the results.

Automated annotation was done with the software package Pedant Pro (http://www.biomax.de). All ORF predictions and annotations were manually corrected by considering all results of the different tools applied. See http://www.regx.de for more information and access to supplementary information.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or coveredby high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeates, allregions were covered by at least one plasmid Sequence; assembly was additionally confirmed by long range por and cosmid end sequences.

Sci. U.S.A. 99:4668-4673(2002).

-i- FUNCTION: Cell wall formation. Adds enolpyruvyl to UDP-N-acetyIglucosamine (By Similarity).

-i- CATALYTIC ACTIVITY: Phosphoenolpyruvate + UDP-N-acetyl-D-glucosamine = phosphate + UDP-N-acetyl-D-glucosamine = phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Transferase; Peptidoglycan synthesis; Cell wall; Cell division;

-!- FUNCTION: This is a component of the phosphoenolpyruvate-dependent erunce phosphotransferaes system (PTS), a major carbohydrate active transport system. The IICD domains contain the sugar binding site and the transmembrane channel, the IIA domain contains the primary phosphorylation site (the donor is phospho-HPr); IIA transfers it to the sugar.

-!-FUNGTION: REQUIRED FOR PROPER EXPRESSION OF OUTER MEMBRANE PROTEIN
--FUNGTION: REQUIRED FOR PROPER EXPRESSION OF OUTER MEMBRANE PROTEIN
GENES SUCH AS OMPF, NMFC, PROTEIN 2, HEMOLYSIN, COLICIN V, OR
COLICIN EI. MAY BE SPECIALIZED FOR SIGNAL SEQUENCE INDEPENDENT,
EXTRACELLULAR SECRETION IN GRAM-NEGATIVE BACTERIA.
--SUBUNIT: Homotrimer that assembles to form a continuous, solvent-
accessible conduit: a 'channel-tunnel' over 140 Angstroms long
that spans both the outer membrane and periplasmic space. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBCELUTAR LOCATION: Integral membrane protein. Outer membrane. SIMILARITY: BELONGS TO THE PRIF FAMILY OF SECRETION PROTEINS. CAUTION: REF. 2 SEQUENCE WAS EXTENSIVELY CORRECTED BY REF. 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EMBL; AE001385; AAC76071.1; -.

-!- CATALYTIC ACTIVITY: ATP + 3-phospho-D-glycerate = ADP + 3-phospho-D-glyceroyl phosphate.
                                                                                                                                                                                                                                                                                                                       -i- SUBUNIT: Monomer.
-i- SUBCELLULAR LOCATION: Cytoplasmic.
-i- SIMILARITY: Belongs to the phosphoglycerate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   STRAIN=DSW 319;
